PROJECTS

Exit-Portal Requirement
- Developed a robust Exit Portal web application specifically for my department using Spring Boot and React. This application streamlines the process of determining graduation eligibility for university students by analyzing their completed courses, earned credits, and fulfillment of category-specific requirements throughout their academic journey.

Edureach
- Developed Flutter app for my University that streamlines student information access. Enter a student ID to view their details and contact information, with options for direct calls and messages.

Driver-Demand Prediction
- BuilThis project focused on predicting driver demand using time series analysis techniques. By analyzing historical driver demand data, including patterns and trends, the project aimed to forecast future driver availability.Deliverd this project in Faculty Development program at GNOIT.
